

IN THE CLAIMS:

Please amend Claims 32 to 36 as shown below. The claims, as pending in the subject application, now read as follows:

1. to 31. (Canceled)

32. (Currently amended) A print control method for a printing system, the printing system including an information processing apparatus and a print device, the information processing apparatus having a printer driver designated a presentation mode as a print setting and the print device capable of executing an ordinary print process or a presentation-mode print process which makes presentation material and distribution material, the method which has a presentation mode to print a presentation material and a distribution material, comprising:

performing by the information processing apparatus:

a job issue step of issuing a single print job according to print setting set by a user via Graphical User Interface of the printer driver;

performing by the print device:

a judgment step of judging whether or not the single print job contains a specific command which designates print setting set by the user corresponds to the presentation mode;

a step of, in a case where it is judged in said judgment step that the single print job does not contain the specific command print setting does not correspond to the presentation mode, executing an ordinary print process; and

a step of, in a case where it is judged in said judgment step that the single print job contains the specific command, print setting corresponds to the presentation mode, adding a command particular to the presentation mode to the single job issued in said job issue step, and executing the [[a]] presentation-mode print process which makes presentation material and a distribution material corresponding to the specific command in the single print job that designates the presentation mode a presentation-mode print process within the single job,

wherein said information processing apparatus adds the specific command that designates the presentation mode to the single job, the specific command particular to the presentation mode is a command to designate the presentation-mode print process presentation mode, a command to designate the number of copies of the distribution material, and a color setting command of the distribution material.

33. (Currently amended) A control method for printing system print control method according to Claim 32, wherein, in the case where the presentation-mode print process is executed, said method further comprising comprises:

performing by the print device:

a step of temporarily storing print data of the print job in a memory of a print device;

a step of executing color setting of the presentation material according to the temporarily stored print data, and a step of printing the presentation material;

a step of executing color setting of the distribution material according to the temporarily stored print data, and a step of executing an N-in-1 layout process for the distribution material;

a step of setting the number of copies set for the distribution material, as the number of prints; and

a step of printing the distribution material based on said step of executing the color setting of the distribution material, said step of executing the N-in-1 layout process and said step of setting the number of prints.

34. (Currently amended) A control method for printing system print control method according to Claim 33, wherein each of said step of executing the color setting of the presentation material and said step of executing the color setting of the distribution material is a step of selecting either monochrome printing or color printing.

35. (Currently amended) A control method for printing system print control method according to Claim 33, further comprising a stapling execution step of executing stapling,

wherein said step of printing the presentation material is adapted to execute the printing on a transparent sheet, and

wherein said stapling execution step is adapted, even if it is instructed to execute the stapling, not to execute the stapling of the presentation material but to execute the stapling of the distribution material.

36. (Currently amended) A computer-readable storage medium which stores a computer-executable program capable of execution by a computer for a for executing a print control method for a printing system, the printing system including an information processing apparatus and a print device, the information processing apparatus having a printer driver designated presentation mode as a print setting and the print device capable of executing an ordinary print process or a presentation-mode print process which makes presentation material and a distribution material, the having a presentation mode to print a presentation material and a distribution material; said method comprising:

performing by said information processing apparatus;

a job issue step of issuing a single print job according to print setting set by a user via Graphical User Interface of the printer driver;

performing by said print device;

a judgment step of judging whether or not the single print job contains a specific command which designated setting set by the user corresponds to the presentation mode;

a step of, in a case where it is judged in said judgment step that the single print job setting does not contain the specific command correspond to the presentation mode, executing an ordinary print process; and

a step of, in a case where it is judged in said judgment step that the single print job contains the specific command, setting corresponds to the presentation mode, adding a command particular to the presentation mode to the single job issued by said job issue step, and executing the [[a]] presentation-mode print process which makes presentation material and a distribution material

corresponding to the specific command in the single print job that designates the presentation mode within the single job,

wherein said information processing apparatus adds the specific command that designates the command particular to the presentation mode to the single job, the specific command is a command to designate the presentation-mode print process presentation mode, a command to designate the number of copies of the distribution material, and a color setting command of the distribution material.

37. (Currently amended) A ~~print control apparatus~~ a printing system, the printing system including an information processing apparatus and a print device, the information processing apparatus having a printer driver designated a presentation mode as a print setting and the print device capable of executing an ordinary print process or a presentation-mode print process which makes presentation material and distribution material, which operates in a presentation mode to print a presentation material and a distribution material, comprising:

the information processing apparatus comprising

a job issue unit adapted to issue a single print job according to print setting set by a user via Graphical User Interface of the printer driver; and the print device comprising:

a judgment unit adapted to judge whether or not the single print job contains a specific command which designates print setting set by the user corresponds to the presentation mode;

a unit adapted to, in a case where it is judged by said judgment unit that the single print job does not contain the specific command ~~print setting-~~ does not correspond to the presentation mode, execute an ordinary print process; and

a unit adapted to, in a case where it is judged by said judgment unit that the single print job contains the specific command, ~~print setting-~~ corresponds to the presentation mode, add a command particular to the presentation mode to the single job issued by said job issue unit, and execute the [[a]] presentation-mode print process which makes presentation the material and a distribution material corresponding to the specific command in the single print job that designates the presentation mode ~~a presentation-mode print process within the single job~~, wherein said information processing apparatus adds the specific command that designates the presentation mode to the single job, the specific command particular to the presentation mode is a command to designate the presentation-mode print process ~~presentation mode~~, a command to designate the number of copies of the distribution material, and a color setting command of the distribution material.

38. (Currently amended) A print system ~~control apparatus~~ according to Claim 37, wherein, in the case where the presentation-mode print process is executed, said print device ~~apparatus~~ further comprises:

a unit adapted to temporarily store print data of the print job in a memory of said ~~a~~ print device;

a unit adapted to execute color setting of the presentation material according to the temporarily stored print data, and a unit adapted to print the presentation material;

a unit adapted to execute color setting of the distribution material according to the temporarily stored print data, and a unit adapted to execute an N-in-1 layout process for the distribution material;

a unit adapted to set the number of copies set for the distribution material, as the number of prints; and

a unit adapted to print the distribution material based on the color setting executed by said unit adapted to execute the color setting of the distribution material, the N-in-1 layout process executed by said unit adapted to execute the N-in-1 layout process, and the number of prints set by said unit adapted to set the number of prints.

39. (Currently amended) A print ~~system control apparatus~~ according to Claim 38, wherein each of said unit adapted to execute the color setting of the presentation material and said unit adapted to execute the color setting of the distribution material is a unit adapted to select either monochrome printing or color printing.

40. (Currently amended) A print ~~system control apparatus~~ according to Claim 38, said print device further comprising a stapling execution unit adapted to execute stapling,

wherein said unit adapted to print the presentation material executes the printing on a transparent sheet, and

wherein, even if it is instructed to execute the stapling, said stapling execution unit does not execute the stapling of the presentation material but executes the stapling of the distribution material.
